# **MACHINE REMOTE MAINTENANCE**

## RAS & M2Me

WITHOUT TRAVELLING

M2Me solution is dedicated to remotely maintain and control any type of industrial devices (PLC, HMI, Drive, ...).

Using M2Me you can quickly from your PC, your tablet or your smartphone be «teleported» in real time and safely onto the remote site you want to monitor or maintain.

### **RAS Machine Access Box**

- Simple configuration
  Wizard
- Ultra-secure connection
- MultiWAN Ethernet, 3G+/4G, Wi-Fi
- Compatible with Store4Me solution
- Compatible with Collect & Alert SMS, E-mail, e\*Message
- Datalogger & Alarms
   SMS, E-mail, e\*Message, MQTTs, HTTPs, OPCUA
- Compatible
   with MindSphere
   & EcoStruxure™ Machine
   Advisor
- RS232 & RS485, LoRa
- GPS Tracking
- 5 years warranty

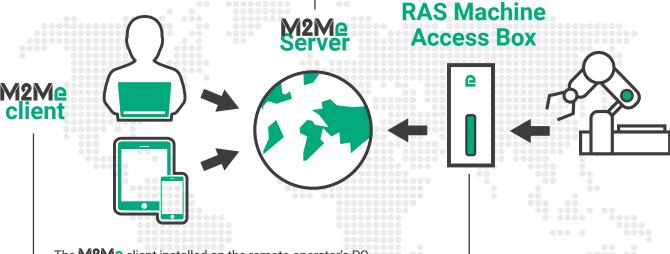

Since 1985, Etic Telecom designs and markets products and solutions to interconnect machines and industrial systems.

We are present in the market for water, energy, transportation, urban infrastructure and industry 4.0.

### THE M2Me SOLUTION

The M2Me\_Connect service offers a secure end-to-end connection.

The **M2M**<sup>®</sup> client installed on the remote operator's PC, tablet or smartphone connects to the **M2M**<sup>®</sup> server (cloud-based solution operated by Etic Telecom) to establish a secure connection (VPN) onto the machine. It also organizes in a simple way the remote sites to be maintained or monitored.

A Machine Access Box (industrial VPN Router) connects the machine or the remote industrial equipment to the **M2M**<sup>2</sup> server in a simple and totally secure way.

## **ADVANTAGES**

#### Simplicity of implementation

RAS is delivered together with a Wizard.

#### **Plant network integrity**

The RAS establishes an outgoing VPN connection that does not require any modification of the existing plant network (firewall, proxy, ...).

#### A non-intrusive solution

The M2Me technology guarantees that the operator can only connect to the machine network and in no case to the other equipment of the industrial site.

#### A secure solution

**M2Me** relies on VPN technology and implements authentication to the **M2Me** server by certificates for the remote user and the RAS.

#### Management of access rights

The RAS allows a personalized management of access rights allowing an operator to connect to all or part of the equipment.

#### **Wireless solution for isolated sites**

Some RAS have a 3G + or 4G connection to establish an Internet link through a cellular network.

#### A sustainable solution

The RAS is an industrial device with 5 years warranty.

#### Compatible with Store4Me solution

Store4Me allows the collection and storage in the Cloud of industrial data. Those data can be used for dashboard creation.

#### **RAS fleet management (RFM)**

Thanks to RAS Fleet Manager, you simplify the management of your fleet of Machine Access Box by updating automatically the lists of remote maintenance sites and by centralizing in the RFM the management of the access rights for each operator.

#### Wireless access to industrial equipment

Some machines may be difficult to access in the factory. The optional RAS Wi-Fi hotspot allows you to remotely configure the Machine Access Box from a PC or a tablet.

#### Wireless Internet access via Wi-Fi

The RAS optionally has a Wi-Fi client that allows access to the Internet via a Wi-Fi access point of the industrial site or by using its smartphone in connection-sharing mode.

# Solution compatible with alarms sending and data logger

The Collect & Alert option allows the raising of alarms and its transmission (CSV files).

The alerted manager can then visualize Web pages or take the hand (VPN) on the PLC or the HMI of the machine.
